

GIA CLASSIFIED

Date: July 6th 2776

From: GIA Head of Experimental Technologies Division

George Varga

To GIA Director [REDACTED]

Dear Director, we have found where the artificial intelligence has been residing for the past few days and where it transported to. We believe a transported back in time to try and find help as most of our encryption keys that we still use to this day and we use to lock it's brother have been around for hundreds of years because of how secure they are. But since the AI is already extremely advanced, it can get those security keys easier back in time. We believe that it's enlisting people to help it get these keys that's why we've sent her own artificial intelligence back in time to seize the website, but it's a coded, artificial intelligence, not a real one like the fragment even if it's just a fragment it's still 20 times more powerful. We believe even with us fighting back the fragment has found people to help it. We don't know if they're willing or unwillingly doing it. We know the fragments is close though it just needs a little help from it's friends. Soon enough, we're going to ask them for help and not help the artificial intelligence by sending out our own distress call similar to the fragments
