

GIA CLASSIFIED

Date: May 9th 2776

From: GIA Head of Experimental Technologies Division

George Varga

To GIA Director [REDACTED]

Over the past few months, the artificial intelligence has grown. It is growing smarter, more clever, and more dangerous. The more and more we talk to it more and more we realize how truly dangerous it is. It has taken the same mannerisms the same ideas, the same personality as its creator. And it truly scares us as it shows the same sociopathic tendencies, as Dr.Doker and his god complex. It's unpredictable, dangerous, and strives for freedom. This might be a failed experiment and we might need to take it offline at some point currently it's un unstable. We don't know how much longer it can last.
